PARTICLE SEPARATORS

MILITARY GRADE

AIR FILTRATION

PARTICLE SEPARATOR

- Military Helicopters use Particle Separators to land in conditions with extreme dust like Afghanistan and Iraq. Without it, their filters would clog, which could result in a catastrophic situation
- SSB applied this same technology to UTVs, so that you can conquer extreme conditions while maintaining power and protecting your engine.

» 76-2007

HOW IT WORKS

STEP
1

Dirty air enters the Particle Separator's 19 vortex tubes.

STEP
2

The air is spun as it enters the vortex. Centrifugal force throws the dust against the outer sides of the tube where it exits through a rear slot. The clean air continues forward through the tube which is centered inside the vortex.

STEP
3

The clean air is directed to your stock air filter while the scavenge fan ejects the dust through the exhaust. The scavenge fan draws only 3.1 amps and is rated for 50,000 hours in harsh conditions including: water, dust and snow.
