ENGINEERED LUBRICANTS

FOR THE LIFE OF YOUR RIDE ONLY THE BEST WILL DO

To create the best oil for any terrain, we invest in rigorous testing to ensure our oil delivers the consistency and performance you demand. The results are Polaris Engineered Lubricants that are tested and perfected to deliver excellent total engine protection for the life of your ride.

WHAT COUNTS IN OIL TESTING:

1. Does it protect the engine at high temperatures?
2. Does it keep the engine free from carbon and buildup?
3. Does the oil hold its viscosity over time?

ENGINE CHECKPOINTS

When evaluating an engine oil and its ability to protect and preserve the engine's power output and lifespan, Polaris engineers focus on key areas within the engine, some of the most critical ones include:

RING LANDS: Poor oxidative performance can lead to carbon and varnish buildup, which results in poor ring seal and loss of power, combustion blow by and fuel dilution of the oil.

PISTON RINGS: During the combustion process, extreme pressures are placed on the top ring, forcing it outward toward the cylinder wall, sealing the combustion chamber. With so much force applied, poor oil film strength between the top ring and the cylinder wall can lead to cylinder wear and loss of power.

ROD BEARINGS: Engine bearings ride on an extremely thin hydrodynamic film of oil. Poor oil film strength or using an oil with a thinner viscosity, can lead to premature bearing wear or even engine failure. Using an oil with high film strength and a strong viscosity, like PS-4 full synthetic, will extend the service life of your engine.

CAMSHAFT: Direct Acting Overhead Camshafts are used on many Polaris Prostar Engines. In this application the camshaft pushes directly on the valve, creating very high contact pressures compared to other camshaft configurations. These forces are so great that inferior oil can break down and be forced out of the contact area leading to increased wear. PS-4 full synthetic additives are specifically designed to provide wear protection against this.
